Internal Angles at Each Station

Internal angles at each station with stations on either sides and distances between stations. The distance from previous station is recorded against the station number in column (2) in the table. The internal angles shall be established using internal/external angle measuring instrument like the odolite, but not with magnetic compass. After establishing at least two consecutive points with Differential Global Positioning System or Global Navigation Satellite System (DGPS/DGNSS) at two Kilometer interval along the boundary.
